## 1.0 SITE DESCRIPTION

**Site Use:** Former Shell Service Station, currently Citgo station. For the purposes of this report, “onsite” refers to the service station property, and “offsite” refers to all properties down-gradient of the service station.

**Surrounding Area:** The Site is located in a mixed commercial and residential area (Figures 1 and 2).

**Lithology:** The overburden sequence, which is formed as rolling upland and steep sided strike valleys, is rarely more than 100 feet thick. In the immediate Site area, the overburden is 60-70 feet thick. The overburden consists of primarily micaceous saprolite and is floored by a weathered schist bounding the competent bedrock zone. Monitoring wells in the weathered schist are screened approximately 63-80 ft. below ground surface (bgs) (deep wells (D)), while wells screened in the bedrock aquifer are located in the range of 70-100 ft. bgs (rock wells (R)). The bedrock geology in the area of the Site is primarily composed of metapelitic schist containing mica, quartz and garnet. The overburden (saprolite) mineralogy likely consists of oxides and clay-species pseudomorphs of the original schist which have been altered during in-situ chemical weathering from both historic and current groundwater interactions. Relict foliation, evident in the saprolitic overburden, has been noted as horizontal to sub-horizontal.

**Sensitive Receptors:**

**Basements / Underground Receptors:** There are single-family homes, many with basements, northwest of the Site on Bryants Nursery Road.

**Surface Water / Wetlands:** The surface water bodies in the vicinity of the Site include two State Highway Administration (SHA) Stormwater Retention Ponds owned by the Maryland Department of Transportation (approximately 400 feet west-southwest and approximately 800 feet north-northeast, respectively), an unnamed pond (approximately 880 feet west-southwest), Bryants Nursery Run (approximately 1,200 feet west), and an intermittent stream (approximately 600 feet northwest). There are no wetlands immediately downgradient of the Site.

**Potable Wells:** There are potable wells in use within 2,500 feet of the station on New Hampshire Avenue and Bryants Nursery Road. A public water main (WSSC) has been installed on Bryants Nursery Road extending to houses 710 and 711. At the time of this report, all homes which can be connected are connected to this water main. All potable carbon treatment units have been removed at this time.

## 2.0 SITE HISTORY

**3.0 ACTIVITIES THIS QUARTER****Groundwater Gauging and Monitoring**

All Site monitoring wells (Figure 3) were gauged on July 14, 2014. During this quarter, depth to water measurements recorded from Site wells ranged from 4.28 feet bgs in monitoring well MW-25D to 29.97 feet bgs in monitoring well 750 BNR (Bryants Nursery Road). Monitoring well MW-02 and tank field well TF-01 were not gauged this quarter due to inaccessibility. The groundwater gauging data is included as Table 1. The shallow hydraulic gradient for this quarter is illustrated on Figure 4. The deep overburden hydraulic gradient for this quarter is illustrated on Figure 5. The bedrock hydraulic gradient for this quarter is illustrated on Figure 6. Based on the July 14, 2014 gauging data, apparent groundwater flow direction is generally northwest from the Site in all three hydrologic zones, but the shallow and deep overburden zones are influenced by the Offsite Groundwater Recovery System.

Weekly gauging is also completed on select BNR monitoring wells (710 BNR, 711 BNR, 720 BNR, 721 BNR, and 740 BNR), which are former potable wells located offsite. These select monitoring wells are gauged weekly to monitor the influence that the Offsite Groundwater Recovery System has on the water resource that supplies the potable wells. Based on the weekly gauging events, the operation of the Offsite Groundwater Recovery System is not influencing the water resource supplying the potable wells. A graph showing the groundwater elevation trends over time for these wells is included in Appendix A.

**Liquid Phase Hydrocarbons (LPH) Detection**

LPH were not observed in any monitoring wells during the third quarter of 2014. LPH have never been observed at this Site.

**Groundwater Sampling from Recovery and Monitoring Wells**

During the third quarter 2014, groundwater samples were collected from nine (9) groundwater recovery wells (RW-01, RW-03, RW-10, RW-19A through RW-23, and RW-27), ten (10) monitoring wells (721 BND, 721 BNS, 730 BND, 730 BNS, MW-24D, MW-24S, MW-25D, MW-25S, MW-26D, and MW-26S), and seven (7) former potable wells (710 BNR, 711 BNR, 720 BNR, 721 BNR, 730 BNR, 740 BNR, and 750 BNR). The samples were submitted to Accutest Laboratories (New Jersey) under chain of custody for analysis of benzene, toluene, ethyl benzene, xylenes, total BTEX, methyl tert butyl ether (MTBE), and fuel oxygenates by EPA Method 8260B.

The laboratory analytical results are summarized in Table 2. Benzene, toluene, ethylbenzene, xylenes, total BTEX, MTBE, and tert butyl alcohol (TBA) concentrations for the third quarter 2014 sampling event are presented on Figure 7. The laboratory analytical reports are provided in Appendix B. Concentrations followed by lab flag “J” indicate an estimated value reported below the method detection limit. The maximum dissolved phase hydrocarbon concentrations, in micrograms per liter (µg/L), of select analytes detected in the groundwater samples collected during this quarter are as follows:

- Benzene: 52.4 µg/L (RW-10) Sector: Onsite
- Toluene: 10.9 µg/L (RW-03) Sector: Onsite
- Ethylbenzene: *Non-Detect in all wells sampled during the Third Quarter*
- Total Xylenes: 10.0 µg/L (RW-03) Sector: Onsite
- Total BTEX: 54.84 µg/L (RW-10) Sector: Onsite
- MTBE: 2,110 µg/L (RW-20) Sector: 240-640 feet from Site
- TBA: 533 µg/L (RW-27) Sector: 240-640 feet from Site

Due to the number of monitoring wells sampled and areal extent of the monitoring network, groundwater constituent concentrations trends are discussed in terms of four sectors defined by distance from the original release area. The four sectors are defined as “onsite” (Former Shell Service Station Property), 80-240 feet from Site, 240-640 feet from Site, and greater than 640 feet from Site (Figure 7).

**Onsite Groundwater Concentration Trends**

Based upon review of historical analytical groundwater data, chemical concentrations in groundwater samples from all onsite monitoring wells indicate generally decreasing benzene, BTEX, and MTBE dissolved-phase concentrations and concentrations below detection limits at well locations noted below. In December 2011, MDE approved the Request to Modify Groundwater Sampling Schedule; the onsite wells are sampled at the following frequency (see table below):

240-640 feet from the Site

Based upon review of historical analytical groundwater data, chemical concentrations in groundwater samples from monitoring wells located 240-640 feet from the Site indicate generally decreasing benzene, BTEX, and MTBE dissolved-phase concentrations and concentrations below detection limits. While MTBE and BTEX concentrations are decreasing in most wells, elevated concentrations in some wells adjacent to the recovery wells may be attributed to the Offsite Groundwater Remediation System drawing in the dissolved phase plume. The wells located 240-640 feet from the Site are sampled at the following frequency (see table below).

**4.0 REMEDIATION SYSTEM OPERATION**

**Onsite Groundwater Recovery System**

The Onsite Groundwater Recovery System was shut down with MDE approval on February 2, 2012. From May 30 to June 1, 2012, the components of the system were permanently disconnected and removed from the Site.

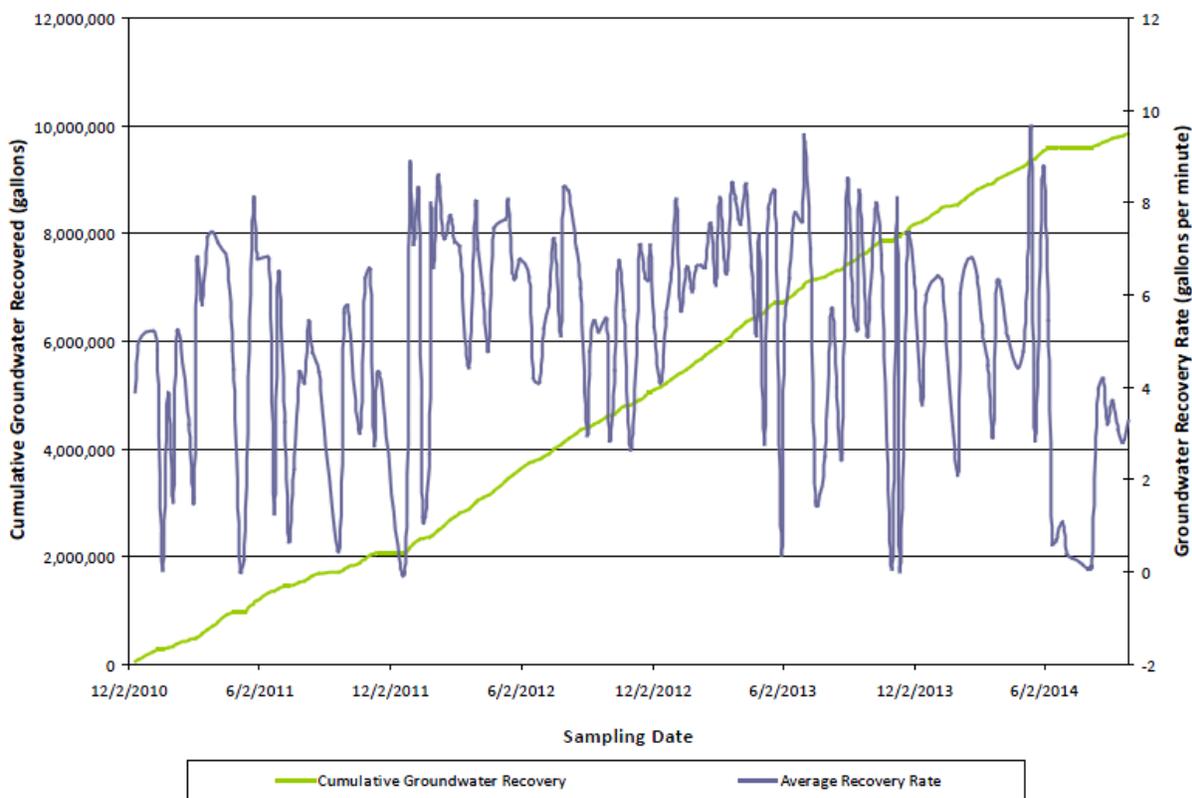

**Offsite Groundwater Recovery System**

The Offsite Groundwater Recovery System is connected to six wells (RW-19A through RW-23 and RW-27). Recovery well RW-19 was turned off on January 18, 2013, and was destroyed by overdrilling. Within the same borehole, recovery well RW-19A was installed, and began operation on February 18, 2013. The recovery wells are screened between 10 and 65 feet bgs. Each well contains an electric submersible pump, which is designed to transfer fluids to the equalization (EQ) tank located inside the offsite groundwater pump and treat system trailer. After accumulating in the EQ tank, recovered groundwater is then pumped through two (2) bag filters, an air stripper, two (2) additional bag filters, and three (3) 1,000-pound granular activated carbon vessels in series before discharging to the storm sewer. The Offsite Groundwater Recovery System was initialized in December 2010.

During the third quarter 2014, an approximate total of 262,172 gallons of groundwater was recovered and treated by the system. Since the system began operation, the system has recovered and treated approximately 9,853,380 gallons of groundwater. Table 4 summarizes the cumulative groundwater recovery, average recovery rate, and operating recovery wells.

The below graph depicts the cumulative groundwater recovery and average groundwater recovery rate since the system began operation in December 2010.

*Cumulative Groundwater Recovery and Groundwater Recovery Rate  
Shell Service Station #137675 - Offsite  
15600 New Hampshire Avenue, Silver Spring, MD*

At the offsite location, system influent, mid-system 1, mid-system 2, mid-system 3, and effluent samples are collected to determine hydrocarbon recovery and treatment. Analytical results of these system samples are summarized in Table 5, and the laboratory analytical reports are included in Appendix B.

Since system startup in December 2010, influent groundwater concentrations have remained below detection limits or have been slowly decreasing.

- Influent benzene concentrations have decreased from a concentration of 7.08 µg/L on December 2, 2010 to 1.3 µg/L on September 19, 2014.
- Influent toluene concentrations have remained below detection limits from December 2, 2010 through September 19, 2014.
- Influent ethylbenzene concentrations have remained below detection limits from December 2, 2010 through September 19, 2014.
- Influent total xylene concentrations have decreased from a concentration of 2.35 µg/L on December 2, 2010 to below detection limits on September 19, 2014.
- Influent total BTEX concentrations have decreased from a concentration of 9.43 µg/L on December 2, 2010 to 1.3 µg/L on September 19, 2014.
- Influent MTBE concentrations have decreased from a concentration of 2,230 µg/L on December 2, 2010 to 1,190 µg/L on September 19, 2014.

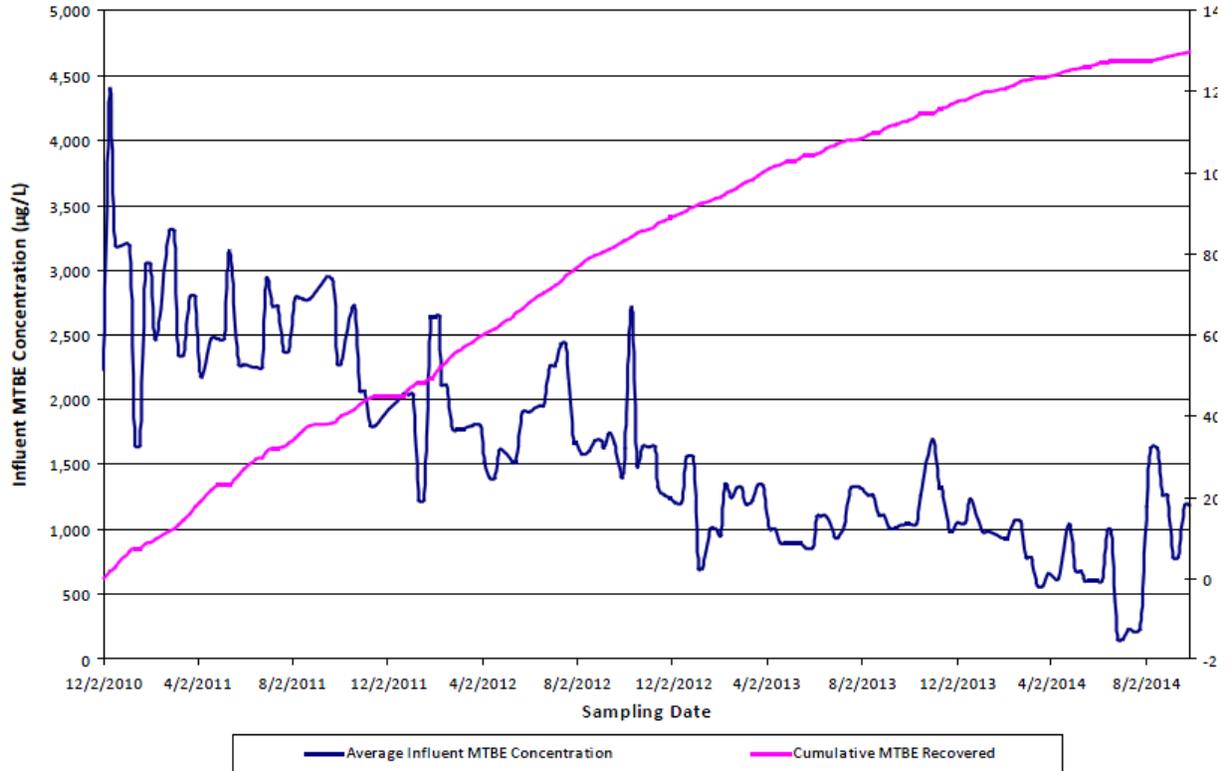

The concentration trends of dissolved-phase hydrocarbons in the influent groundwater samples can be observed on the below graph.

15600 New Hampshire Avenue, Silver Spring, MD*

During the third quarter 2014, approximately 2.5 pounds of MTBE were recovered in the dissolved phase; since the offsite system began operation, approximately 130 pounds of MTBE have been recovered in the dissolved phase from groundwater. Influent MTBE concentrations and cumulative MTBE recovered are presented in the below graph.

**5.0 WORK PLANNED FOR FOURTH QUARTER 2014**

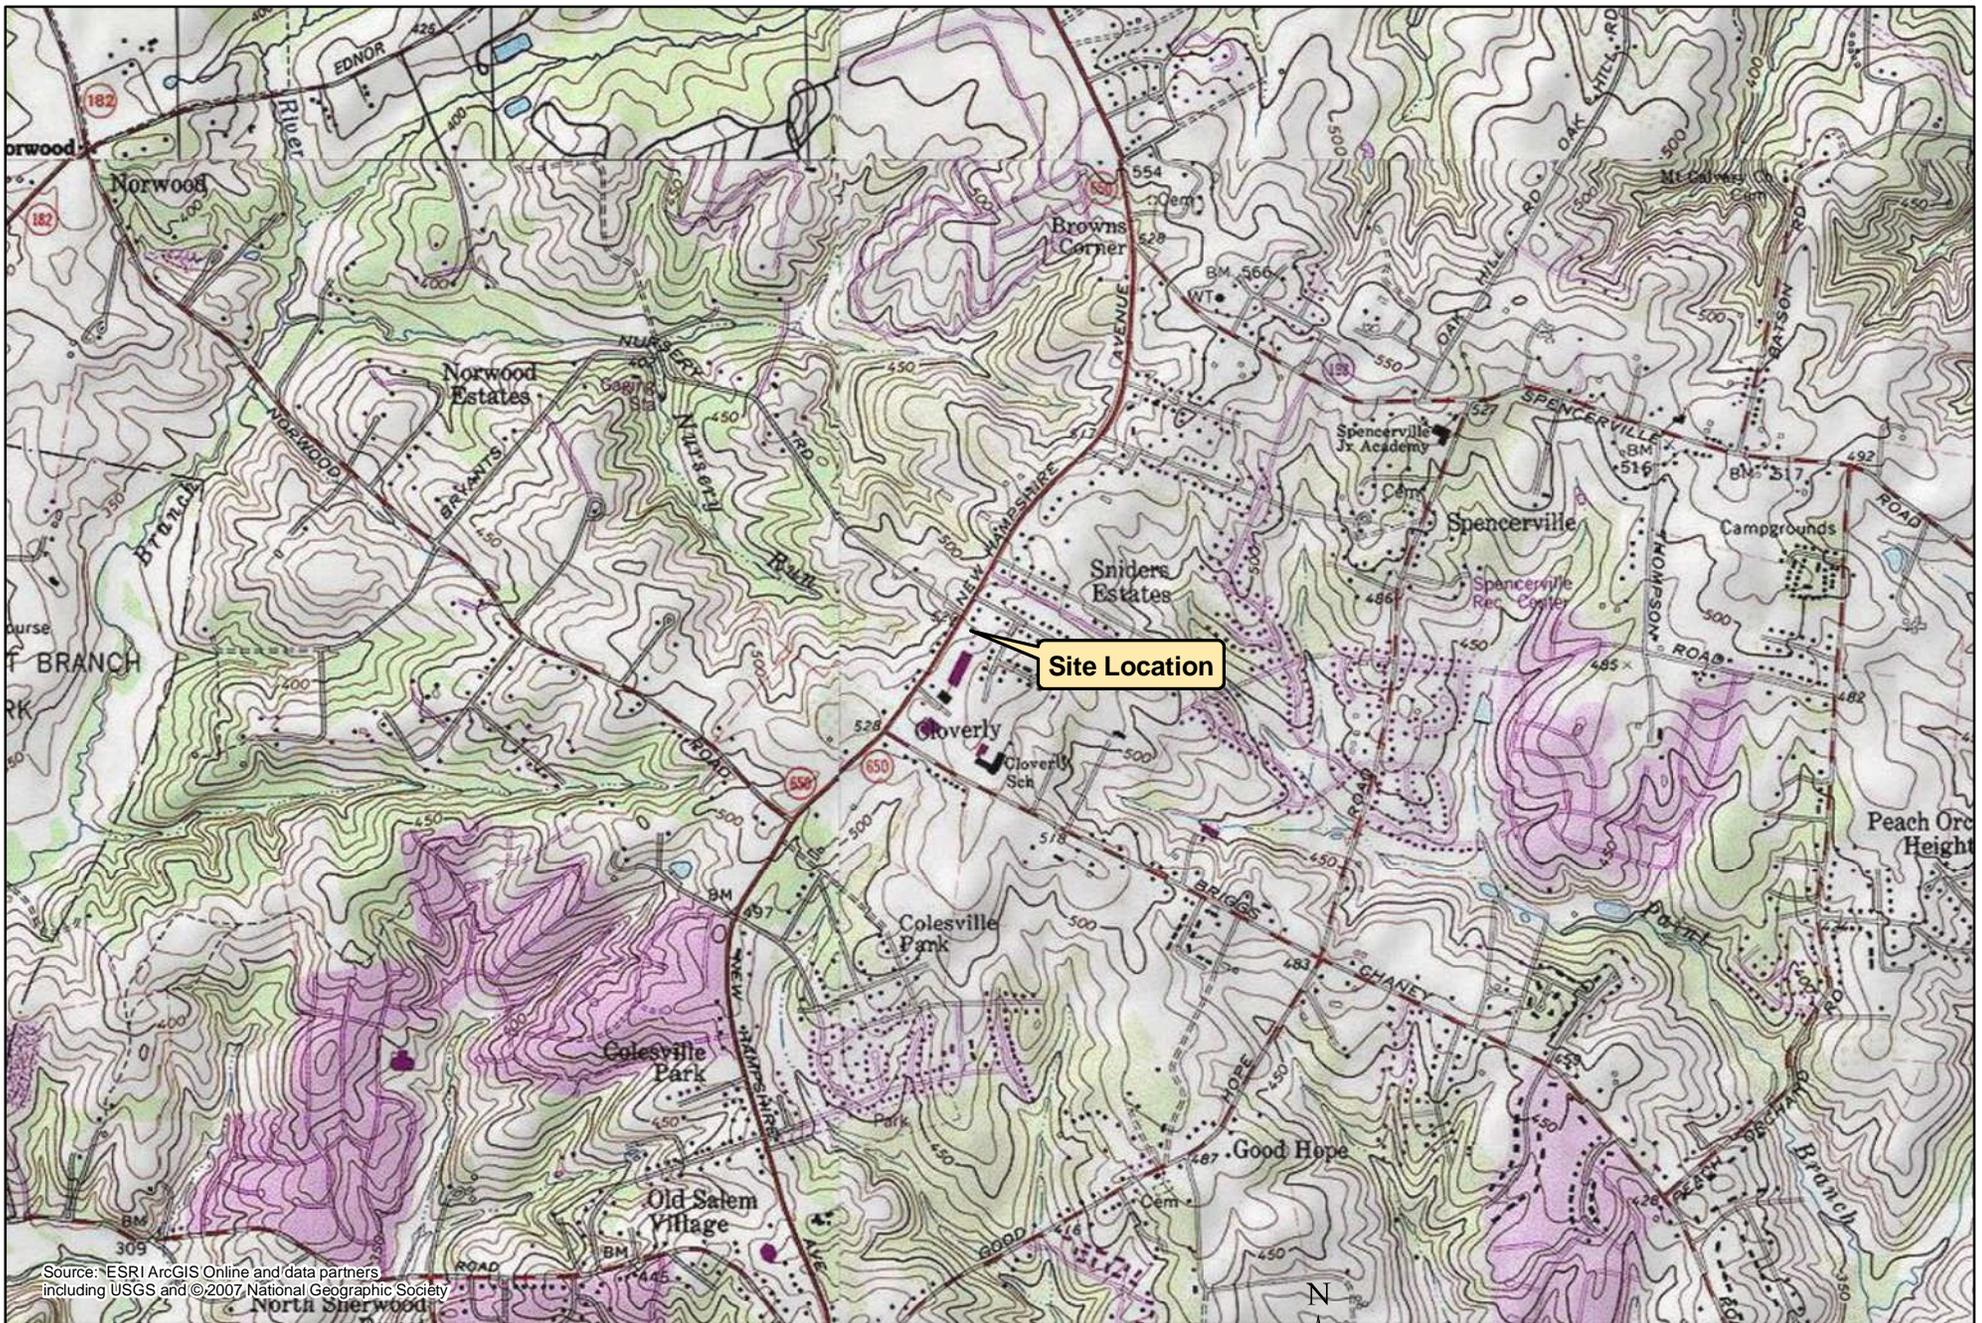

- Conduct quarterly groundwater gauging of all Site monitoring wells.
- Conduct quarterly groundwater sampling in accordance with the Modified Groundwater Sampling Schedule approved by MDE in December 2011.
- Conduct weekly operation and maintenance (O&M) and bi-weekly sampling of the Offsite Groundwater Remediation System.
- Conduct weekly gauging of select offsite monitoring wells.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover
